Educational Centre with traditional breeds of domestic animals in the Park Forest Marjan, Split – reality or not?

Nediljko ŽEVRNJA
Prirodoslovni muzej i zoo vrt, Kolombatovići šetalište 2, 21000 Split, Hrvatska (nediljko@prirodoslovni.hr)

Abstract

The Park Forest Marjan represents a unique green area near Split, of exceptional natural and cultural value. Marjan was protected in 1964 in accordance with the Law on Nature Protection in the Park Forest category, and because of its historical value, it is also permanently protected as a cultural asset (2014). Establishment of the Educational Centre with traditional breeds of domestic animals is a kind of through the nation and sex chains of the ZOO garden, research and breeding of the Natural History Museum at Marjan. The main goal of the Centre would be keeping of different breeds of purebred flocks for their genetic conservation and reproduction with the purpose of preserving the genetic stock, cooperation with the gene bank of Croatian animals for storing the genetic material of original breeds, protection and promotion of original and traditional breeds, and raising public awareness of the need and importance of their preservation. The animals planned for accommodation at the Marjan Educational Centre would be characterized by historical importance of the race. Animals would be characterized for the coastal area, of peaceful nature, and acceptable for coexisting with children of all ages, e.g. bushy goats, Croatian turkeys, flocks, breeding of purebred species with a maximum of 60 breeds are planned, some of which are not yet included in the list of native and protected breeds and strains of domestic animals. We consider they have to be raised and managed in the adequate system.

Key words: Education, culture, national heritage of domestic animals, Park Forest Marjan

Introduction

The aim of this project is to establish an Educational Centre with traditional breeds of domestic animals within a unique green area of the Park Forest Marjan of exceptional natural and cultural value, placed in the vicinity of the existing zoo. The Centre would have various purposes such as therapeutic, leisure, educational, ecological, scientific, professional and recreational.

The Marjan hill should be observed through several aspects, its historical changes, its basic values and landscape, ecological, cultural and historical features, beginnings of its future preservation, its railways and through revitalization of the protected area features through conservation, protection and promotion activities.

The idea is to organize the activity in the vicinity of the first Marjan park including ZOO and its location buildings. From the beginning of 20th century, the side of the plateau with ZOO was one of the most important points in cultural and recreational life of the city and a favorite meeting place of Split citizens. Gradual degradation of this area leads to its so frequent use by citizens although the interest still exists at least in the municipalities and municipalities of Marjan.

Importance of domestic animals for inhabitants of Dalmatia

The importance of domestic animals for inhabitants of Dalmatia was not underest. They were kept for wide range of animal forces, e.g. for heavy work (breeding (Fig. 1 and 2), Z. transport for people and goods (Fig. 3), source of foodstuffs, fabrics, mops and materials (e.g. leather, wool, sackcloth, bones to produce clothing items, footwear, blankets (Fig. 4), music instruments, tools, etc.) The most important domestic animals in Dalmatia were raised in coastal (the western) important sheep, goat, cattle, donkeys with hybrids, pig, horses, bees, chickens, turkeys, skunk, rabbit, pigeons and dogs. (Ozimec et al., 2015).

Goals of the Educative Centre

Main aspects of the Educational Centre would be: rearing parent stock of breeds for further selection and reproduction for the conservation of genetic stock (Čačić et al., 2015); cooperation with the gene bank of domestic animal breeds of Croatia for the storage of genetic material; initiating establishment of research department/centers that would contribute to the conservation of the immeasurable genetic wealth; raise public awareness, through educational activities, about conservation of these breeds and about their meaning for history and everyday life of people in area of Dalmatia; conservation and promotion of traditional and indigenous breeds; rehabilitation of indigenous breeds in their natural environment; involvement of the tourists of Dalmatia in Split, as a part of Dalmatian County by organizing fair where the products of these breeds could greatly contribute to the conservation of natural, especially breeds, which was otherwise in danger of vanishing. Very important role in conservation and promotion of these breeds could have the Educational Centre in Park Forest Marjan. Reality? Yes!

Conclusion

Because of the steady changes of people in rural area of Dalmatia during 19th century, a lot of breeds of traditional and hybrid animals and hybrid traditional breeds become endangered and are gradually vanishing. So, revitalization of the genetic richness of these breeds could greatly contribute to the conservation of natural, especially breeds, which was otherwise in danger of vanishing. Very important role in conservation and promotion of these breeds could have the Educational Centre in Park Forest Marjan. Reality? Yes!

The list of traditional and indigenous breeds in Educational Centre

Species	Breeds
Horse (<i>Equus caballus</i> Linnaeus, 1758)	Dalmatian bušak horse* (Fig. 5) Croatian mountain and island horse*
Donkey (<i>Equus asinus</i> Linnaeus, 1758)	Littoral Dinaric donkey**
Cattle (<i>Bos taurus taurus</i> Linnaeus, 1758)	Busha** Grey Dalmatian cattle* (Fig. 6)
Sheep (<i>Ovis aries aries</i> Linnaeus, 1758)	Breč sheep Dalmatian pramenka sheep** Ruda Sheep of Dubrovnik** Pač sheep**
Goat (<i>Capra hircus hircus</i> Linnaeus, 1758)	Croatian coloured goat** Dalmatian white goat**
Chicken (<i>Gallus gallus gallus</i> Linnaeus, 1758)	Croatian hen* (Fig. 7)
Turkey (<i>Meleagris gallopavo</i> Linnaeus, 1758)	Dalmatian turkey* (Fig. 8)
Pigeon (<i>Columba livia</i> Gmelin, 1789)	Dalmatian Zimovka pigeon* (Fig. 9) Zadarski Pevčak pigeon* (Fig. 10)
Croatian honey bee (<i>Apis mellifera carnica</i> Pollman, 1879)	Mediterranean grey bee**

* extinct or insufficiently known traditional breeds (Ozimec et al., 2015)
** indigenous Croatian breeds (Barač et al., 2011)
